4: Hobley G-5 (ca. 1900) 1902 FL11 Luo FL11

524 *Games.*—They play a kind of *bao* with sixteen holes; they put three small stones in each hole. The boys play a kind of hockey with a wooden ball.

727 Upon return from war about two out of every three cattle go to the chief; the chief then divides his share of the cattle with his brothers, and a man who has distinguished himself in war is given a reward of cattle by the chief. A man who distinguishes himself in war is also often given a wife without payment.

262 *Food, etc.*—They eat practically all meat except that of the hyæna. Some young men eat leopard meat to make them fierce in fighting; the meat of a serval cat is not eaten. The women do not eat fowls; some women do not eat sheep and eggs; some eat hippopotamus meat, some not; women do not drink milk, but eat it cooked with food. They have a curious custom of mixing cow's urine with the [272 826] milk of the cow; the urine is allowed to stand a day or two to increase its flavour; they say it increases the amount of the butter and gives it a nice flavour, and it is moreover supposed to have a medicinal effect. The crested crane (*Balaeriea gibbericeps*) is never killed or eaten by these people.

752 757 *Medicine, etc.*—They pierce the chest until the lung is reached for chest complaints, and they even sometimes cut a small piece out of the lung through the aperture. They have medicine for wounds and for arrow poison, also for ulcers and for purging, but not for diarrhœa. They also have medicine to avert [164] a threatened miscarriage. They profess to have a certain antidote for snake poison.[1] Venereal disease is practically unknown among the Ja-Luo.

789 Before going to war they often eat the outer seed case of a certain tree, and this is supposed to ensure their return unwounded; it is called *Ochola.*

728 *Peace ceremonies.*—They kill a sheep and put part of it into a wooden mortar used for crushing grain, and the representative of each side takes out a piece and gives it to the opposite side. An old man from the side that is beaten will go to the village of the chief of the enemy and proceed to sweep up the cattle boma; this will be accepted as a sign of submission.

231 *Killing animals for food.*—They kill oxen by sticking a knife into the jugular vein; the head of the beast must be pointed to the west during the operation. Sheep and goats are killed the same way. Fowls are strangled.

428 768 *Succession customs, etc.*—When a man dies the property goes to the brother if the children are small; if the eldest son is grown up he takes the property and gives his brothers a share; but a son is not allowed to take the amount paid by anyone who marries one of his sisters; this amount all goes to the father's brother. The brother of the deceased takes the wives, but the eldest son will probably take the youngest wife of his deceased father.

[1] After considerable difficulty I obtained specimens of the plants said to be used as antidotes for snake poison, and Dr. Rendle, of the Botanical Department, British Museum, has kindly identified the plants for me. One plant, named *Phytolacca Abyssinica*, is used internally, an infusion being made from the leaves. The other plant, *Ipomea palmata*, is used externally, a plaster of the macerated leaves being placed on the wound. I have not been able to discover the physiological action of these plants.
